

PassShield

- Secure User Authentication
- Password Generation
- Password Storage

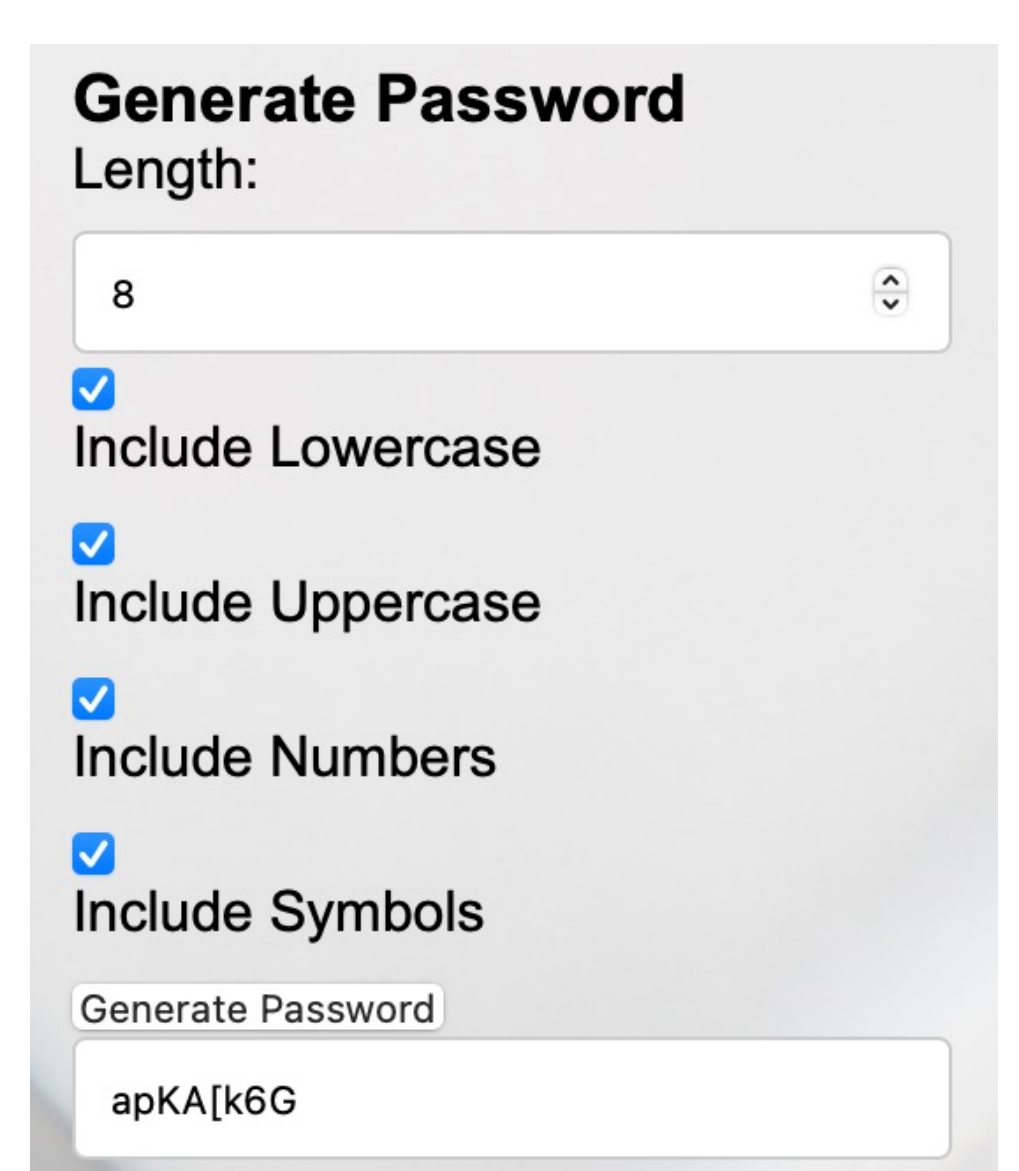

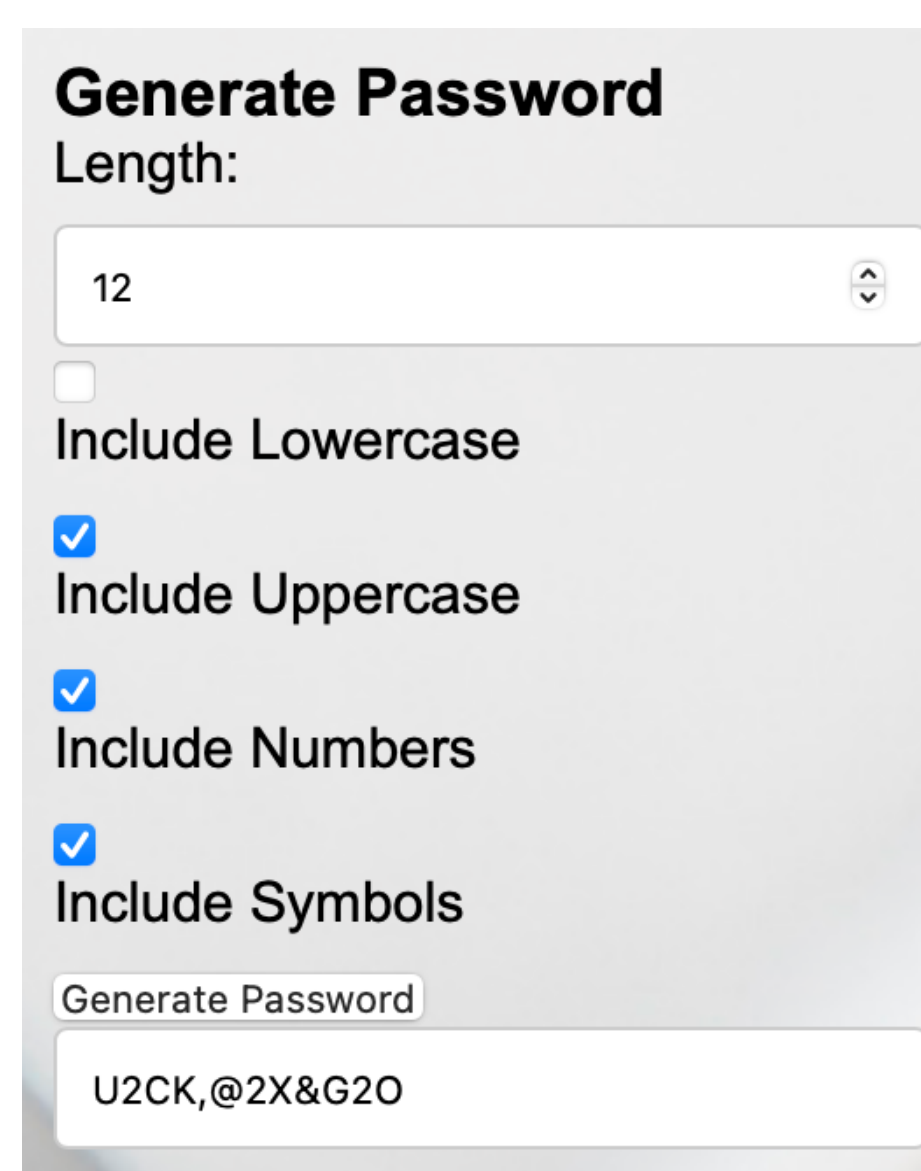

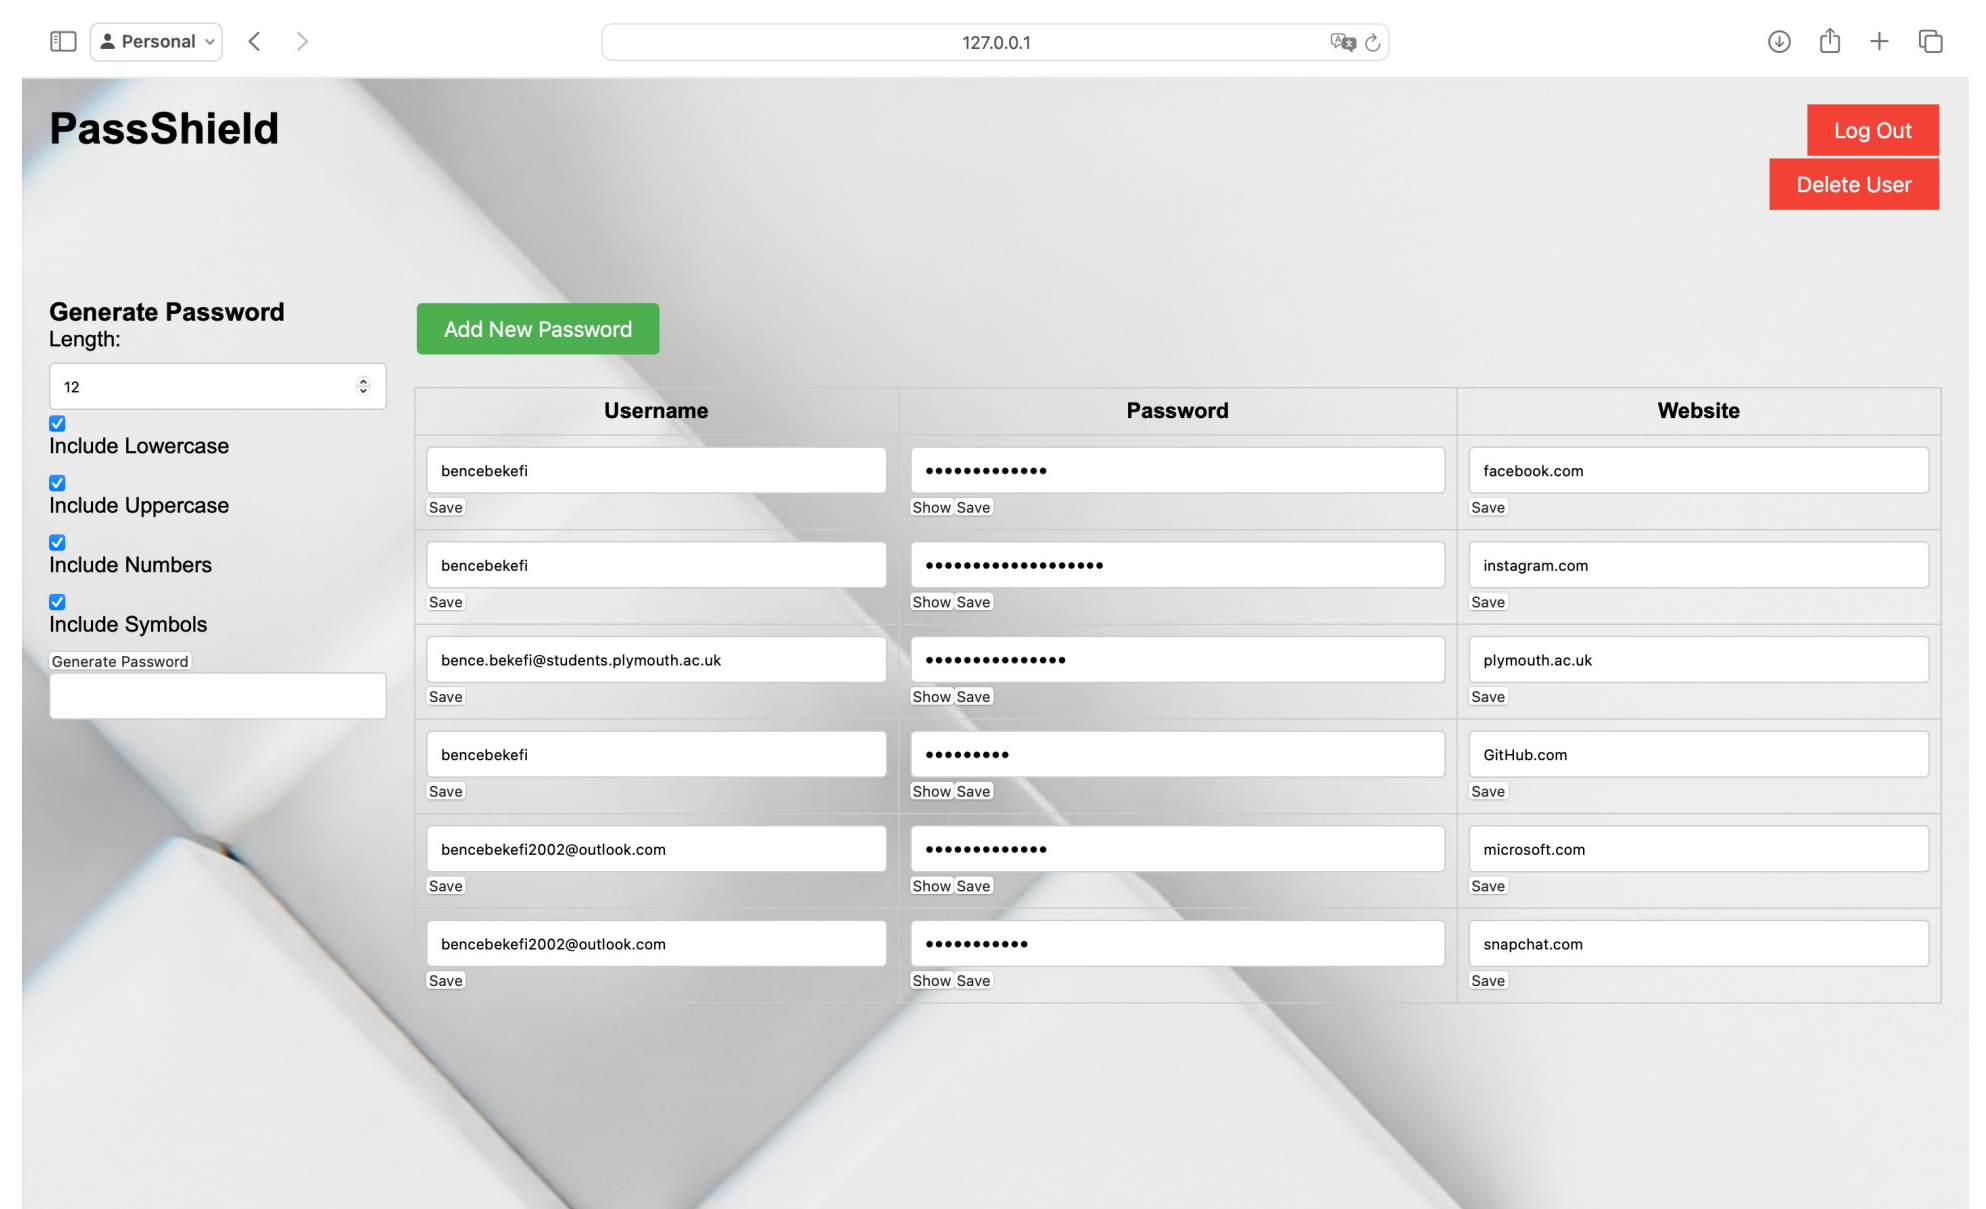

PassShield helps its users manage and store their passwords, offering a simple solution for storing online credentials. With features like secure server-based authentication, password storage, generation and organization PassShield will make it easy for users to stay secure online.

The Login and registration pages enable user authentication and account creation. These features are essential to ensure secure access to PassShield’s password management functionalities while maintaining user privacy and confidentiality. The Home Page serves as the main dashboard in the heart of PassShield, offering users a centralised hub for organizing and accessing their passwords securely. Within dashboard, users can view, add, edit and delete password entries.

PassShield utilizes HTML, CSS, JavaScript, Node.js and Express.js to deliver secure password management and user authentication functionalities.

The Home Page serves as the main dashboard in the heart of PassShield, offering users a centralised hub for organizing and accessing their passwords securely and generating new ones
